Save Our Water Now

Ways we can help

*turn off the tap so it doesn't drip.
*use the water left over from the bath to water the plants.
*put a bucket under you in the shower so you do not waste water.
*when you wash your clothes hook it up to a pipe to water your garden.

We need to save water so we can use it so it is not wasted and if we contaminate it we could get really sick and could die.

fun fact
over a year we use the same amount of water as 150,000 cans of coke

a driping tap loses 12 litres of water a day

a flushing toilet loses 9 litres of water
